Ken Kirby graduated with a B.Eng (Hons) degree in Materials Science & Metallurgy and a PhD in Metallurgy. He had ten years' industrial experience in production, research and development of rare earth, transition metal alloys. He joined Brookes Bell as in-house metallurgist in 2006 and has been an Associate since 2010.

Before joining Brookes Bell, Ken was responsible for investigating the quality of raw materials and finished products, implementing procedures for the casting of rare earth alloys, and for overseeing their production.

He also participated in an EU Project which investigated and devised new technology for the manufacture of high-temperature magnets.

Since joining Brookes Bell in September, 2006, Ken has undertaken investigations into failures of a wide range of ships' structure, machinery and components, including fatigue and corrosion mechanisms. He has also investigated numerous cargo damage claims. These have included alleged contamination of both ferrous and non-ferrous metals; ores and other mineral cargoes; and machinery and other finished products. Ken has carried out investigations on-site and in the laboratory, and has produced expert witness reports for litigation and has also acted as an expert witness in arbitration.

Professional and Academic Qualifications

B. Eng. (Hons) Materials Science & Metallurgy. II (i) degree classification (Liverpool University).

Ph.D in Metallurgy (Birmingham University).

I.A.T.A. Shipping Dangerous Goods by Air Certificate.

Member of the Institute of Metals Minerals and Mining.

Metallurgy Employment

2010 to present	Associate at Brookes Bell.
2006-2010	Metallurgist at Brookes Bell.
2000-2006	Research Metallurgist at Less Common Metals Ltd.
1996-2000	Cast Alloy Production Supervisor at Less Common Metals Ltd.

Nature of Work Recently Undertaken

Investigation of:

Claims involving ferrous and non-ferrous cargoes, including re-bar, steel coils, aluminium sheet/ingots, and various finished products.

Claims involving mineral ore cargoes and cargo sampling.

Component failures; material and chemical analysis.

Corrosion of ferrous and non-ferrous products, plant and machinery, including claims for sulphur damage to ships' structure.

Failure of major items of vessels' structure/equipment, including rudder horns; rudder stocks; camshafts; crankshafts; hull structure; etc.

Failure of marine wire-ropes, including crane wires, lashing wires/chains, and their associated equipment.

Quality of raw materials and finished products, and the effect of using contaminated/defective products in sound production processes.

Quality of welding, including new-building disputes, and failures resulting from defective welding.
